

# Outcome Sponsor – Dr David Phillips Director of Public Health

# Outcomes Focused Monitoring Report JULY 2018

The following pages have been provided to summarise the current position against each outcome indicator and performance measure. This will help the council to identify and focus upon potential areas for further scrutiny. All risks are drawn from the <u>Corporate Risk Register</u> and mapped against specific population indicators where relevant. Any further corporate risks that relate to the 'Healthy' outcome is also included to provide a full overview. Please note that information relating to outcomes and shared accountability can be found on the <u>Dorset Outcomes Tracker</u>.

### Corporate Plan 2017-18: Dorset County Council's Outcomes and Performance Framework HEALTHY – Executive Summary

Performance Measure

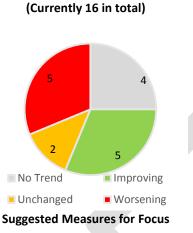

Inequality in life expectancy between different population groups (male and female)

Rate of hospital admissions for alcoholrelated conditions (female)

Depression recorded prevalence (QOF): % of practice register aged 18+

Under 75 mortality rates from cardiovascular diseases

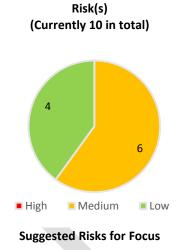

Proportion of people who use services and careers who reported that they had as much social contact as they would like

Proportion of clients of alcohol treatment service drinking less at 3 months

% of young people succesfully completing substance use treatment

Proportion of clients making 5% weight loss

Emotional and behavioural health of looked after children

There are currently no high or deteriorating risks on the corporate risk register that are associated with the HEALTHY outcome. **HEALTHY: 01 – Population Indicator Inequality in life expectancy between population groups -** Outcome Lead Officer Jane Horne; Population Indicator Lead Officer David Lemon

**Story behind the baseline:** People in Dorset generally live longer lives compared to the average for England, however there are differences in life expectancy between the most and least deprived communities in Dorset. The slope index of inequality (SII) is a high-level indicator that reflects this disparity; a value of greater than 1 indicates that those in the poorer areas have a lower life expectancy than those in the most affluent areas in Dorset, with the higher the value the greater the gap. Although the SII in Dorset is lower than the England SII for both males and females, there has been little change in the SII for males for around the last 8 years.

For women, there has been a sustained increase in inequalities over the last 5 years, although this is not yet statistically significant. This could be because the health of women in poorer areas has worsened, that is has improved only for women in the most affluent areas, or a combination of the two. Differences in opportunities, in access to or take up of services, and in health outcomes along the life course all contribute to these inequalities in life expectancy. For example, those in poorer areas may find it more difficult to access or engage with traditional services; the Live Well Dorset service has focused on trying to get greater engagement in these areas. Loneliness and social isolation also affects more people in these areas.

Due to KS4 regrading we have removed 'Inequality gap level 2 qualification including E & M' and 'Free School Meal Gap of those achieving 9-4 in English and Maths' has been introduced.

Partners with a significant role to play: Health & social care, and education services, as well as the voluntary sector and all key partners in this at both strategic and operational levels.

What are we doing?		

Addressing inequalities is a statutory duty of the local authority and sets the context within which we assess other indicators and priorities. It is firmly embedded within the Dorset Joint Health and Wellbeing Strategy, and the Prevention at Scale (PAS) portfolio of the Sustainability and Transformation Plan (STP), overseen by the Dorset Health and Wellbeing Board (DHWB). DHWB brings together partners across Dorset to work collectively.

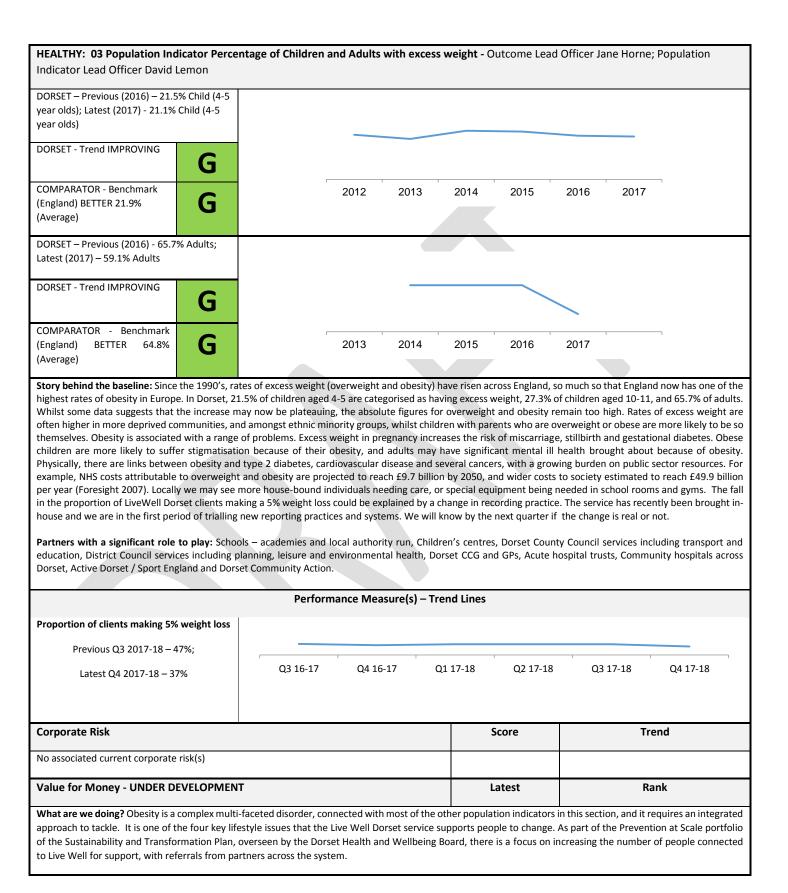

HEALTHY: 02 – Population Indicator Rate of hospital admissions for alcohol-related conditions - Outcome Lead Officer Jane Horne; Population Indicator Lead Officer Will Haydock DORSET – Previous (2016) – 690 Male;

Story behind the baseline: Rates of hospital admissions related to alcohol are much higher than 30-40 years ago, due to a combination of higher levels of alcohol consumption and improved data recording. Admission rates remain higher for men than women, but whilst the rate for men is mostly static, the rate among women appears to be rising. This relates to ta faster rise in average rates of drinking amongst women than men in the past 30 years. Admission rates are highest amongst those aged 40-64; while this age group suffers the most health impacts, patterns of drinking are usually established earlier in the life course. Health harm related to alcohol is not perfectly correlated with overall levels of consumption, as other mediating factors such as diet, physical activity, smoking, and the pattern of consumption all play a role. Individuals from lower socio-economic groups are more likely to suffer harm from alcohol, despite average lower rates of consumption.

The new figure (90%) for the percentage of young people successfully completing substance use treatment is likely to be more accurate. Public Health Dorset now commission the service directly, and previously people leaving were being recorded as exiting successfully if they had derived any benefit from their treatment, whereas now success is only recorded if clients have genuinely completed the full course of treatment recommended by the relevant professional. **Partners with a significant role to play:** Dorset Clinical Commissioning Group (CCG), Dorset Healthcare University Foundation Trust (providers of treatment services and health visiting / school nursing), Dorset County Hospital, Poole Hospital, The Royal Bournemouth and Christchurch Hospital, Schools and colleges, GP practices, Voluntary and Community Sector providers and Live-Well Dorset.

**Story behind the baseline:** This new indicator provides a measure of the number of people living with depression, which, as widely reported, is on the increase. The indicator shows the prevalence of depression as recorded on GP practice registers. Mental health is one of the two main causes of sickness absence in the working age population, at an estimated cost of around £8 billion per year in the UK. Our childhood has a profound effect on our adult lives, and many mental health conditions in adulthood show their first signs in childhood.

On January 21, the Daily Telegraph published some useful national data on mental health, sourced from MIND, the NHS, Young Minds, and the RCN: 1 in 4 people will experience a mental health problem each year; the average age of onset for depression, as diagnosed now, is 14, compared to 45 in the 1960s; There was a 116% rise in young people who talked about suicide during Childline (UK) counselling sessions in 2013-14, compared to 2010/11; mental health trust budgets in England were cut by 8.25% from 2011 to 2015; there was a 20% rise in referrals to community mental health teams in England from 2011-15; 2,100 Beds for mental health patients have been closed from 2011 to mid-2016 in England; In England as of May 2016, 41% of people referred to a talking therapy have a three month wait between referral and treatment.

\*Regarding emotional and behavioural health of looked after children the Strengths and Difficulties Questionnaire should be completed for every child looked after for at least 12 months and aged 5 to 16 years-old as at the end of March. A score of: 0 to 13 is considered normal; 14 to 16 is borderline; and 17 to 40 is a cause for concern.

Partners with a significant role to play: Dorset Clinical Commissioning Group (CCG), Dorset Healthcare University Foundation Trust (providers of treatment services and health visiting / school nursing), Dorset County Hospital, Poole Hospital, The Royal Bournemouth and Christchurch Hospital, Schools and colleges, GP practices, Voluntary and Community Sector providers and Live-Well Dorset.

What are we doing? Schools are the key universal service promoting young people's emotional health and wellbeing.

Our Emotional Health and Wellbeing strategy and a key strand of the Prevention at Scale work, connected closely with the Children's Alliance for Dorset, is a focus on developing improved pathways and support to improve child mental health and wellbeing, including risk taking behaviour, using the THRIVE model across the whole system. **HEALTHY: 05 Population Indicator Under 75 mortality rates from cardiovascular diseases** - Outcome Lead Officer Jane Horne; Population Indicator Lead Officer David Lemon

**Story behind the baseline:** Whilst rates of premature mortality from cardiovascular disease (CVD) nationally have been falling significantly over the last five decades, this remains the second biggest cause of death nationally after cancer. The dramatic reductions in deaths have been due to reductions in smoking, better management of cholesterol and hypertension, and improved treatments following a heart attack or stroke. However, the decline in deaths has flattened out in more recent years as improvements in these factors have been increasingly offset by increases in obesity and diabetes and reductions in physical activity. Although rates in Dorset overall are significantly lower than the England average, there is significant variation between and within districts, with rates from GP practices in the most deprived communities being 3-4 times that in the least deprived communities. CVD is the biggest contributor to inequalities in life expectancy.

<u>Please note that unfortunately we are no longer able to provide a male female split and have added an additional trend line that represents the revised combined data approach. We have kept the historical data for male and female as a helpful comparison.</u>

**Partners with a significant role to play:** To influence the factors identified as contributory to premature deaths from diabetes and CVD we have identified a wide range of key partners and stakeholders we need to work with including Dorset CCG, Dorset County Hospital, Poole Hospital, Royal Bournemouth Hospital, GP practices, Smoking cessation services, Live-Well Dorset, Schools and colleges, Voluntary sector, Local planning authorities and Employers.

What are we doing? Many of the actions we take to prevent CVD	need to start early	, in pregnancy	or childhood, ai	nd link with the	other population	on indicators in this

What are we doing? Many of the actions we take to prevent CVD need to start early, in pregnancy or childhood, and link with the other population indicators in this section. Healthy behaviours in childhood and the teenage years also set patterns for later life. The Live Well Dorset service supports people to change four key lifestyle issues: stopping smoking, reducing alcohol intake, increasing physical activity and healthy weight.

A key focus of the PAS STP work overseen by the DHWB, is to increase the number of people connected to Live Well for support, with referrals from partners across the system.

HEALTHY: 06 Population Indicator Levels of physical activity in adults - Outcome Lead Officer Jane Horne; Population Indicator Lead Officer David Lemon

COMPARATOR - Benchmark (England) BETTER – 57.7% (Average)	G						

Story behind the baseline: In May 2016 Sport England published 'Sport England: Towards an Active Nation Strategy 2016-2021'. Notable parts of this include physical activity, focussing more money and resources in tackling inactivity and investing in children and young people from the age of five outside the school curriculum. Active Dorset has tendered for a Sport and Leisure facilities Assessment and Strategy covering the six Dorset district councils. The County Council has supported this as it will provide a useful analysis at both district and county level. The Dorset Joint Health and Wellbeing Strategy, PAS and the STP all have a focus on increasing physical activity. Benefits of increased physical activity include reduced risk from CVD, diabetes, many musculoskeletal conditions and improved mental wellbeing, so there is a link with many of the other population indicators in this section. Keeping our countryside, including our AONBs, accessible and in good condition facilitates physical activity. Ideally, we would like to survey AONB condition every 5 years but this has not been possible in recent years due to diminished resources. However, the Dorset AONB landscape condition assessment is being re-done this year. Though, the pace of change on a landscape scale is slow. In terms of Rights of Way maintenance, despite significant reduction in overall funding across the Countryside services, the outputs for ROW jobs have doubled over the last 5 years and for the first time we now complete more jobs than there are new jobs coming in, so we are able to start working through the back log – which is highly beneficial for helping people to access the RoW network and therefore be more physically active.

Partners with a significant role to play: Partners with a significant role to play: Dorset Clinical Commissioning Group (CCG), Dorset Healthcare University Foundation Trust (health visiting/school nursing), Schools and colleges, GP practices, Voluntary and Community Sector providers and Live-Well Dorset.
